

BRITTOOL

Quality Since 1908

Product Catalogue 2008

Britool Tools

The British Tool and Engineering Company – first started production in 1908 and Britool has been the number one choice for professionals ever since. With a proven track record of supplying high quality tools to a wide spectrum of industries we have a hard won and jealously guarded reputation. Our tools are used to maintain equipment used in some of the most testing conditions on the planet – from the highest altitudes to the ocean depths. Britool – tools you can depend on since 1908.

The British Tool and Engineering Company – the company which founded the Britool brand – first started production in 1908 and Britool has been the number one choice for professional engineers ever since. Demand for the company's products grew strongly between the wars and during the Second World War, Britool was the principal supplier of tools to the British armed forces, supplying over 200 million wrenches, sockets and accessories. The widespread use of Britool products during the war brought the high quality of the brand's products to the attention of a wider audience, significantly increasing market knowledge and made Britool the number one tightening tool brand in the UK.

Combination Spanner and Sets

- Britool Combination Wrenches are supplied in three different lengths standard, long and extra long,
- All feature stress relief drive on the ring end which distributes the surface load to relieve possible stress areas.
- The open jaw end features a constant radius of curvature to reduce stress and jaw flexing.
- All wrenches are manufactured to ISO 7738.

Professional 8 Piece Combination Spanner Set

Set Contains:

10,11,12,13,14,15,17,19

- Britools advanced ring configuration increases the contact area between the ring and the fastener and minimises stress which reduces the chance of the fastener becoming damaged.
- Constant radius of curvature reduces stress and jaw flexing at the open end.
- Chrome plated and heat treated for optimum performance and corrosion protection.
- Drop forged for uniform grain structure giving increased strength and reliability.
